1. ADDITIONAL DEFINITIONS.

- **“User”** means an individual person and/or device authorized by You to use and/or benefit from the use of the software, or is the person and/or device actually using any portion of the Licensed Software.
 - **“Active User”** means a User who is creating new data, and their archived data is available or accessed for Discovery, Supervision, analytics, and end user access or search.
 - **“Legacy User”** means a User who is not creating new data, but their archived data is available or accessed for Discovery, Supervision, analytics, and and user access or search.
 - **“Inactive User”** means a User who has no content in their personal archives.

A generic device, such as computer account for a printer or a conference room with a mailbox, that is not uniquely owned by an individual User (the device might be used by several individual Users who share the same password), does not require a separate User license. A license is just required for each individual User who has access to the data from this generic device.

“Cold Disaster Recovery Equipment” means a server and/or processor or device on which the Licensed Software may be installed and configured under a Cold Disaster Recovery License, and which is not production use servicing transactions or requiring workloads during periods of Your normal internal business operations.

“Content Source” means one type of content that is archived such as Slack, One Drive, etc.

“Disaster” means an unforeseen occurrence causing the operation of the applicable systems on which the Licensed Software is used for Production Use, or the Licensed Software installed on such systems, to be substantially impaired or prevented, which occurrence may include but is not limited to fires, earthquakes, floods, and computer viruses.

“Failover Readiness Testing” means testing of the procedures for transferring Your production operation from one server to another.

“Front End Terabyte” or “FETB” shall mean the total aggregate amount of data archived from a source, for example a File Server or SharePoint Server. Any partial terabytes of data shall be rounded up to the next whole terabyte. One Terabyte is equal to one thousand twenty-four (1,024) gigabytes of data.

“Gigabytes” means the total aggregate amount of uncompressed data storage capacity and/or computer memory that is managed by the Licensed Software. One Gigabyte is equal to 1,024 megabytes of data.

“**Processor**” also referred to as a “CPU”, means the logic circuitry that responds to and processes the instructions that run a computer and/or that accesses or runs the software. Each processor may be comprised of multiple processing cores which may each independently act as individual processors. When indicated by Veritas that the Processor is licensed on a per-core basis, the number of processors shall be counted as the total number of cores such that a processor with “x” cores is counted as “x” processors.

“**Production Use**” means any functional operation of the Licensed Software in support of Your normal business operations (such as normal productive use and pre-production testing other than Failover Readiness Testing).

“**Terabyte**” means 1,024 Gigabytes of data.

“**Testing Day**” means a period of twenty-four (24) consecutive hours, or any lesser portion of such twenty-four (24) hour period.
